Assignment: Chapter 3 SQL
GitHub Repository: https://github.com/suna2km/MySQL_Chapter3.

This database assignment was a good learning experience. Working with Suna allowed us to discuss different approaches to writing SQL queries and solving problems. We were able to help each other understand the requirements, test our queries, and identify mistakes before submitting our work. I also became more comfortable using statements, filtering data, sorting results, and working with other functions.

One challenge we faced was that some queries did not return the expected results. We spent extra time troubleshooting queries to verify that our SQL statements matched the assignment outputs. We also had to carefully compare our output with the expected results to make sure everything was correct. Although this process was sometimes frustrating, it helped improve my understanding of how SQL handles different conditions.

Overall, I believe this assignment strengthened my SQL skills and gave me more confidence in writing database queries. Working as a team with Suna made the assignment more manageable because we were able to share ideas and learn more. If I were to do this assignment again, I would spend more time planning and testing each query individually before moving on to the next one.
